

FirstNet WAN Optimization

Wide Area Network's (WAN) are the foundation of any inter-connected company, enabling collaboration, communication and business productivity throughout the organisation. The performance of the WAN is critical to business and productivity.

The FirstNet WAN Optimisation-as-a-Service (WOaaS) offering has been tailored to enable businesses of all sizes to take advantage of this technology as an affordable managed service.

What is WAN Optimisation

WAN optimisation devices accelerate applications and improve the performance of all applications running over a wide area network, to a private cloud or even public cloud services such as Microsoft Office 365.

WAN Optimisation reduces costs

Optimisation devices help companies free up bandwidth, allowing for enhanced performance on existing links, consolidating systems, simplifying branch office systems, improving efficiency and reducing system administration.

Disaster Recovery

Maintaining a disaster recovery and backup process to meet compliancy is often manual and consists of moving data off site by changing hard disks or tapes. This is a time consuming process that increases administration over head, increases risk and lengthens the backup and recovery process. WAN optimisation provides automated backup solutions the ability to protect your data between offices or to a remote backup site, enabling more frequent and reliable backup and replications.

Support

FirstNet provides proactive support and monitors all WAN Optimisation device critical system and network elements to ensure your WAN is performing optimally all day every day.

Benefits to your business

- Improve application access over the WAN
- Improve employee productivity
- Addresses insufficient, expensive or congested network bandwidth
- Allows you to adopt Cloud Services and leverage off the advantages of the Cloud
- Simplify branch office infrastructure and achieve consolidation
- Implement or improve remote data backup and replication
- Reduce Total Cost of Ownership (TCO)
- Transition your IT spend to operational expenditure.
- Eliminate WAN optimisation management and support

Centralise and simplify

Companies with branch offices often deploy duplicate systems. Centralising your branch office servers has many advantages.

- Fewer servers to buy, patch, and upgrade
- Less software to buy, maintain, and upgrade
- Lower electricity usage
- Managed a single security, Disaster Recovery and backup strategy
- Improved IT staff productivity, including less costly and time consuming travel to remote sites
- Simplify branch relocation
