

# SecureWeb Cloud

## Key Features

### Malware & Phishing Protection

Protect your network from malware and phishing attacks with SecureWeb's categories of malware protection. SecureWeb will block access to compromised websites, malicious websites, spam-based websites and spyware.

### URL Filtering

SecureWeb Cloud filters website URLs into 53 predefined categories such as social media, news, pornography, gambling etc. The system contains over 500 million website addresses in 200 languages, each sorted into the predefined categories.

### Comprehensive Reporting

Customers have access to a full suite of over 50 predefined reports on user or group activity. Real time browsing activity can also be viewed. These reports can be scheduled or exported in multiple formats.

### Roaming Devices

SecureWeb is Perfect for BYOD environments where employees use multiple devices on and off site. SecureWeb Cloud offers you cloud based DNS Filtering to bring powerful enterprise filtering to all your users, regardless of their location.

### User Identification

SecureWeb Cloud to identify individual users and report on their activity, allowing for more granular reporting and control. The SecureWeb DNS Proxy is a small install on premise or a virtual environment which integrates with AD or LDAP. to allow you to create per user or per group reporting.

## What is SecureWeb Cloud?

SecureWeb Cloud is a cloud-based web filtering service which allows you to monitor, control and protect your business and users from online threats.

SecureWeb Cloud allows you create a granular policy for your users to control internet access and block malware in your organisation. Comprehensive reporting allows you see internet activity in real time and also choose from a large number of predefined reports on usage.

The cloud-based solution checks your DNS request against a predefined policy, thus allowing or blocking access to the requested URL. Only requiring a simple DNS redirect to the SecureWeb servers makes set up simple and quick, allows for scale and eliminates latency.

# SecureWeb Architecture

## SecureWeb Cloud Technical Specifications

### Cloud Based Service

- DNS based solution requiring simple DNS redirect to the SecureWeb servers
- Simple to set up and manage.
- Facilitates scale.
- Eliminates latency

### Malware Protection

- SecureWeb Cloud protects your users, business and data
- Block viruses, phishing and other malware
- Block compromised websites
- Block access to spam, botnets
- Block access to spyware and malicious websites
- SSL supported

### Custom Policies

- Choose from 53 categories of website to create the required policy for your organisation
- Per location white and black lists
- Cloud Keys to bypass policy rules as required
- Multiple locations managed through one portal
- Customisable block page

### Reporting Services

- Choose from 55 predefined reports
- Fully customisable reporting
- Per location or per user reporting options
- DNS proxy for AD integration
- Scheduled reporting
- Multiple export options
- Real time browsing view
- Email notifications
- Syslog supported

### User Identification

- User requests can be identified by installing an AD agent on the network
- Facilitates granular control and reporting
