FirstNet

Direct Internet Access

FirstNet Direct Internet Access

At FirstNet we can deliver Internet services suited to your business needs and goals. Direct Internet Access offers a cost-effective way to connect all users on your Local Area Network (LAN) or WAN (Wide Area Network) to the Internet 24-hours a day. It delivers high-speed, reliable and stable Internet access over a dedicated connection with unlimited Internet usage at a fixed monthly charge.

Services are provided over available fixed network access technologies and complement your IT or managed data network services connectivity.

Through our strategic partnerships with all the major internet providers in South Africa we deliver high quality local and international IP transit bandwidth. Customers do not need multiple international links for redundancy purposes as global reach is provided via extensive capacity on undersea cable connectivity (SAT3,WACS ,SAFE,EASSY & SEACOM).

DIA Premium

This superior service provides local and international bandwidth in various combinations to suit your business requirements. We assure a 100% committed local and international throughput according to each chosen combination. The service carries the highest priority across our Internet backbone and will always delivery the best service possible at any point of time.

DIA Standard

A cost effective solution designed for the use of standard Internet applications such as browsing and e-mail, and consists of a mix of domestic and international traffic. DIA Standard carries the second highest priority across our Internet backbone.

Features

- Reliable Internet Connection
- Dedicated Internet Connectivity (1:1)
- International and Local access can tailored for your business needs

Benefits

- Single Service provider for your internet needs
- Constant international / local connectivity
- Centralised control of your internet traffic
- Access from a FirstNet Datacentre or customer site

Local and International ratios

Access to local and international bandwidth in customer specified ratios. National bandwidth has the ability to burst to the full link speed when the international portion is underutilized and capacity is available.

The level of international connectivity is determined by the customer's requirement and configured accordingly, enabling access to international connectivity up to the stipulated international portion of the link speed.
