Microsoft Azure Peering Service

WHAT IS MICROSOFT AZURE PEERING SERVICE

Microsoft Azure Peering Service (MAPS) is a partnership program with key service providers to provide best-in-class public Internet connectivity to the enterprise customer.

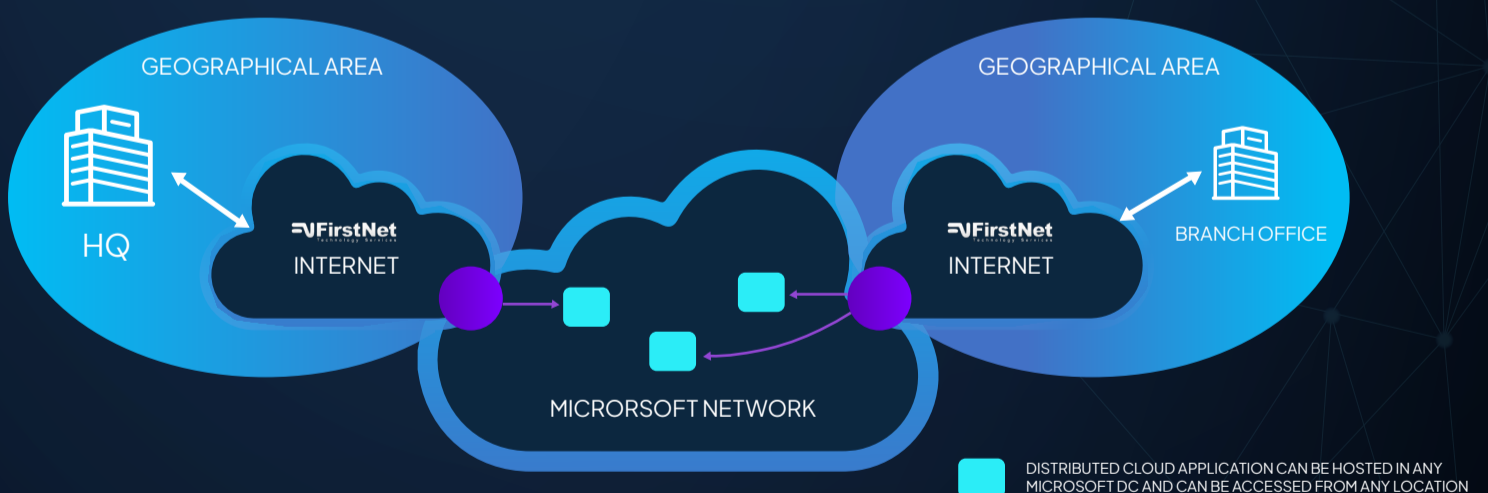

FirstNet are proud to be part of the program offering direct, highly available, geo-redundant connections and optimized routing to the Microsoft global network.

When selecting FirstNet as your service provider, you are selecting an ISP which is connected to Microsoft through fully redundant connections. These connections are optimized for high throughput, better latency and at an edge location that is close to your business.

FIRSTNET'S CONNECTIVITY TO MICROSOFT USING MAPS

USING FIRSTNET'S SDWAN FOR DISTRIBUTED CONNECTIVITY TO MICROSOFT CLOUD

BEHIND THE SCENE

FirstNet will provide:

- Connectivity to Microsoft Cloud at a location nearest to you.
- FirstNet will maintain:
 - high available (port redundant),
 - high throughput with predictable latency (PNI as opposed to public exchange peering)
 - Geo-redundant connectivity with Microsoft Global Network.

Microsoft will provide:

- Traffic prioritization over its global network
- Traffic insights and route analytics
