Add–on features

+ **Managed services offering for end–to–end support and management of your firewall**

+ **FortiAnalyser as a Service for enhanced analytics and reporting**

Dedicated Virtual Firewall Platform

Customers can run their own dedicated virtual firewall in our cloud with dedicated compute resources which are highly available. This ensures high performance while allowing sizing according to customer's needs and also being easily scalable. Our VirtualFirewall Offering provides all features of the Shared Services platforms as well as the Security Fabric and can be easily added to our FortiManager as a Service offering for customers with multi-site / multi-firewall deployments.
