

AI Gateway · Cloudflare, managed by FirstNet

Every AI provider. One control point.

Your apps call more than one AI model, and each provider has its own keys, limits and bill. Cloudflare AI Gateway sits between your applications and those providers, so you route, cache, limit and log every request in one place.

1 gateway

for every AI provider your apps use

Fallback

retries, and a switch to a backup provider

Caching

repeat answers served without paying twice

1 view

of AI usage and spend across providers

Sound familiar?

- Each app team manages its own AI keys and providers
- An AI provider slows down or fails, and your feature goes with it
- AI costs arrive on several bills with no clear owner
- No one can show which prompts and responses went where
- A traffic spike or misuse can run up the bill overnight

One gateway, many models. Change providers or add a fallback with a configuration change, not a rewrite.

One gateway, three ways to run AI well

Keep AI available

Automatic retries and fallback to a backup provider, so a slow or failed model doesn't take your feature down.

[Routing](#) · [Retries](#) · [Fallback](#)

Control cost

Cache repeat requests, set rate limits and see AI spend across providers in one view.

[Caching](#) · [Rate limiting](#) · [Cost analytics](#)

See and govern

Logs and analytics for every request: volumes, performance, errors and what is being asked.

[Analytics](#) · [Logs](#) · [Guardrails and DLP](#)

Start with one application, then bring other teams and providers onto the same gateway.

What FirstNet does for you

1

Map

List the apps, models and providers in use.

2

Connect

Point each app at the gateway, one at a time.

3

Configure

Routing, fallback, caching and limits per app.

4

Integrate

Send logs to your SIEM or FirstNet monitoring.

5

Manage

Cost reviews, tuning and escalation into Cloudflare.

Why FirstNet

- ✓ **One accountable provider** for connectivity, cloud, security and voice, with one Rapid Response entry point.
- ✓ **Joined up with your platform.** AI Gateway alongside FirstNet cloud, security and Sovereign AI on one contract.
- ✓ **Local engineers** aligned to your change windows and South African working hours.
- ✓ **Cloudflare MSSP partner**, ICASA-licensed group, ISO 27001:2022 and ISO 9001.

Getting started

1

Discovery call. Which apps use AI, which providers they call and what it costs today.

2

Design session. We agree routing, fallback, caching and limits with your team.

3

Scoped pilot. One application on the gateway before a wider rollout.

What we will need from you: your AI provider accounts, the applications that call them and a named technical contact.

Let's elevate your AI apps.

Book an AI security assessment with your FirstNet account team.

Cloudflare is a cloud platform and is not a managed SOC or MDR service. Features, availability and outcomes depend on solution design, scope and the signed customer agreement. These controls support, but do not guarantee, compliance with POPIA or ISO standards; compliance remains a shared responsibility. Caching, fallback and limits depend on how each application is configured. Cloudflare and the Cloudflare logo are trademarks of Cloudflare, Inc. All other names belong to their respective owners.
