

Connectivity · LEO Satellite, powered by Eutelsat OneWeb

Connect every site. Beyond the limits of the ground.

When fibre is unavailable, mobile coverage is unreliable or a site needs to be connected quickly, FirstNet LEO Satellite is a practical, business-grade alternative. It works alongside fibre, LTE/5G, SD-WAN and security for remote, temporary and hard-to-reach locations.

Enterprise LEO

low-earth-orbit satellite for challenging locations

Installed

site assessment, installation and activation

Managed

monitoring and coordinated support from FirstNet

1 provider

LEO, fibre, LTE/5G and SD-WAN, one partner

Sound familiar?

- Fibre is not available at the site, or the build will take months
- Mobile coverage is weak or unreliable
- One link goes down and the whole site stops working
- A new or temporary site needs to be online now
- Each site has a different provider and support desk

We manage the outcome, not just the dish. The satellite provides the connection. FirstNet manages the environment around it.

Where LEO fits your business

Primary connectivity

Remote offices and operational sites where fibre or reliable terrestrial connectivity is not available.

Mines · Farms · Lodges · Depots · Regional branches

Resilient backup

An independent path alongside fibre or LTE/5G. With SD-WAN, intelligent failover and application-aware routing.

SD-WAN failover · Independent of terrestrial routes

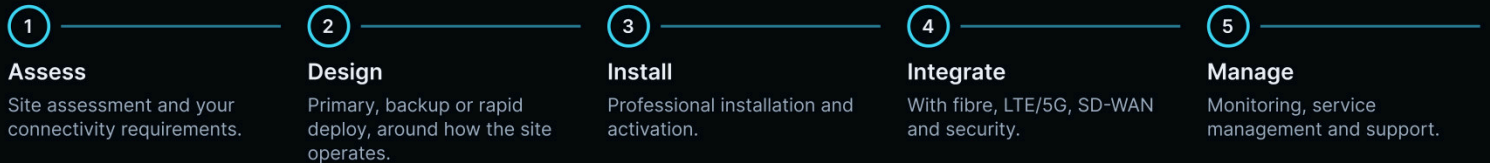

Temporary and rapid deployment

Construction sites, project offices, events and new locations, without waiting for permanent infrastructure.

Construction · Events · New sites from day one

Lower latency than traditional satellite supports cloud platforms, voice, video calls, payments, remote access and collaboration.

What FirstNet does for you

Why FirstNet

- ✓ **One accountable partner** for LEO, fibre, LTE/5G, SD-WAN and security.
- ✓ **Proactive monitoring** and service management across technologies and providers.
- ✓ **Built for South African business:** mining, agriculture, logistics, construction, hospitality and distributed locations.
- ✓ **Local support** from FirstNet, with ISO 27001 and ISO 9001 certification.

Getting started

- 1 Talk to a connectivity specialist.** Tell us about your sites and how each one is used.
- 2 Site assessment.** We confirm what each location needs.
- 3 Quote and install.** Primary, backup or rapid deploy, managed by FirstNet.

What we will need from you: site locations, how each site is used today, and an on-site contact.

Let's elevate your connectivity.

Request a LEO Satellite quote or talk to a connectivity specialist.
