

Modern Network · FirstNet broadband, Peplink and Cloudflare

Every site online. Every user secured.

Replace MPLS lines, branch VPNs and a firewall box at every site with three layers from one provider: FirstNet broadband underneath, a Peplink router at each site, and Cloudflare securing every user and app, wherever they work.

3 layers

links, edge and cloud from one provider

Sub-second

failover: live calls stay up when a link drops

No VPN

zero trust access to each app, by identity

1 SLA

and one Rapid Response desk for the lot

Sound familiar?

- MPLS lines cost a lot for what they carry
- A site with one link stops when it does, often in load-shedding
- Remote staff wait on a slow, overloaded VPN
- Every branch has a firewall to buy, patch and renew
- Links, routers and security sit with three suppliers

Three layers, one service. FirstNet broadband is the foundation; Peplink and Cloudflare sit on top.

Four ways to buy, one provider

Complete

Primary and backup connectivity from FirstNet, a Peplink router and Cloudflare zero trust and cloud firewall, managed 24/7.

New sites · One supplier · SLA end to end

Overlay

A Peplink router and Cloudflare zero trust on top of the links and contracts you already have.

Keep your links · SLA on device and overlay

Essentials

FirstNet business broadband, a compact Peplink router and the Cloudflare app on every device.

Lowest cost · Best effort, no SLA

Advanced: a Fortinet or Sophos firewall on site, for regulated or high-risk organisations.

What FirstNet does for you

1

Survey

Links, power, users and apps at each site.

2

Design

Link mix, Peplink model and Cloudflare policies.

3

Pilot

One site and one team live first.

4

Roll out

Sites move in waves around contract dates.

5

Manage

Links, routers and policies run by our NOC.

Why FirstNet

- ✓ **Peplink Certified Partner** with Peplink Certified Engineers and years of bonded connectivity work.
- ✓ **Cloudflare Partner Network** member, with partner escalation into Cloudflare.
- ✓ **Your links, our network:** fibre, DIA, LTE/5G, wireless and LEO satellite under one contract.
- ✓ **One accountable provider** for connectivity, cloud, security and voice, with one Rapid Response desk.

Getting started

1

Site and link review. Your sites, current links and the contracts that are running.

2

Design session. We agree the package, the link mix and the security policies with you.

3

Pilot site. One site live and monitored before a wider rollout.

What we will need from you: a site list, current links and contracts, and your identity provider (Entra ID, Okta or Google).

Let's elevate your network.

Talk to your FirstNet account team about a modern network for your sites.

Peplink is a trademark of Peplink. Cloudflare is a trademark of Cloudflare, Inc. Packages, SLAs and availability depend on the site survey, link availability and the signed service schedule; best-effort services carry no SLA. Peplink to Cloudflare site tunnels are designed and tested per site. No prices are shown; your account team quotes per site.
